

Write an if-else ladder to categorize age: 0-12: Child 13-19: Teen 20+: Adult. Convert the Age Logic into Python code.

```
age = int(input("Enter age: "))
```

```
if 0 <= age <= 12:
    print("Child")
elif 13 <= age <= 19:
    print("Teen")
elif age >= 20:
    print("Adult")
else:
    print("Invalid age")
```

Find Leap Year

```
#include <iostream>
using namespace std;

int main() {

    int year;

    cout << "Enter a year: ";

    cin >> year;

    // Leap year condition

    if ((year % 4 == 0 && year % 100 != 0) || (year % 400 == 0)) {

        cout << year << " is a leap year." << endl;

    } else {

        cout << year << " is not a leap year." << endl;

    }

    return 0;

}
```

a,b and c are three number. Find the Max Number.

```
#include <iostream>
using namespace std;

int main() {
```

```
int a, b, c;

cout << "Enter three numbers: ";

cin >> a >> b >> c;

int max_num;

if (a >= b && a >= c) {

    max_num = a;

} else if (b >= a && b >= c) {

    max_num = b;

} else {

    max_num = c;

}

cout << "The maximum number is: " << max_num << endl;

return 0;

}
```
