Date: 07th June 2026

1. Project Title

Online Hall Management System for A F M Kamaluddin Hall

2. Abstract

The A F M Kamaluddin Hall Management Web App is a modern and safe website made to automate all daily activities of the hall [1]. Right now, managing the hall depends on paper registers, which takes too much time, causes typing mistakes, and makes it hard to track room seats or fee histories [2]. This new web system solves these problems by creating a single digital database where student records, room choices, and payment details are saved safely [3].

The application works in two main ways. First, it has an Admin Control Panel where the main user can add staff, change basic settings, and control user access rights based on their roles [4]. Second, it has a secure Student Portal where residential students can log in to check their room status and payment histories [5]. Built with C#, ASP.NET Core MVC, and an MSSQL database, this system works fast, holds a large amount of data easily, and protects user passwords and login sessions from outside attackers [2, 5].

3. Proposed Table of Contents (TOC)

1. Introduction
2. Objectives
3. Tools And Technology
4. Working Process Flowchart
5. Use Case Diagram
6. Data Flow Diagram
7. MVC Structure
 - a. Model Files
 - b. View Files
 - c. Controller Files
8. GUI - Graphical User Interface
9. User Access Control
10. Function and Modules
11. Project Demo screenshot
12. Results & Report
13. References
