

PMSCS 623
Quiz – 2 Makeup

Class Roll:

Name:

1. Perform Bubble sort algorithm on the following numbers:

{23, 17, a, -5, 96, 45, b, c}

where, a = alphabetic order of the first character of your last name

b = alphabetic order of the second character of your last name

c = alphabetic order of the third character of your last name

N.B.: alphabetic order means:

A = 1, B = 2, C = 3,, Z = 26

2. Find **value –(-b)** in the following numbers using Binary search algorithm:

{-12, -17, a, -5, -8, -11, c}

where, a = alphabetic order of the first character of your last name

b = alphabetic order of the second character of your last name

c = alphabetic order of the third character of your last name

N.B.: if the list is NOT sorted then arrange the list in ascending order first and then do the Binary search algorithm.
